- Redux
- Tailwind CSS
- Node.js
- MongoDB
- Git

PROFILE SUMMARY

Motivated and product-oriented Software Engineer with hands-on experience in building modern web applications using React, Next.js and TypeScript. Strong focus on clean architecture, SSR performance, and polished UI/UX. Successfully delivered real client projects including a complete migration of a production website to Next.js, and developed personal SaaS and open-source tools from scratch. Comfortable working across the stack — from API logic and authentication to responsive UI and component design. Quickly learning, proactive, responsible, and truly passionate about creating products that look and feel professional.

WORK EXPERIENCE

Fullstack Developer

2023 – Present

Freelance / Remote

- Migrated a large production website (pokercheck.ru) from a legacy React SPA to Next.js with SSR, significantly improving SEO, loading speed and page structure.
- Rebuilt UI components, optimized routing & rendering, refactored state management for long-term maintainability.
- Collaborated directly with the client, gathered requirements, and delivered features on time.
- Implemented performance improvements and accessibility fixes, boosted Lighthouse score and Core Web Vitals.

Tech: React, Next.js, TypeScript, Redux, Tailwind, Vercel

Indie Developer

2022 – Present

Personal projects

- Built Relinxr, a SaaS platform for link analytics with dashboards, charts, and click aggregation. Focused on UX, data accuracy and real-time updates.
- Created dLlemma, an open-source task manager with a built-in rich text editor and local-first data storage for privacy.
- Designed full product lifecycle: UI/UX, frontend architecture, backend services, deployments, testing & documentation.
- Continuously learn and apply best practices in code quality, security, and scalable architecture.

Tech: React, Next.js, TypeScript, Node.js, MongoDB, Prisma, Git, Storybook
